# Evaluation of therapeutic efficacy of vaccine/anti-PD-1 combination in TC-1 mouse model

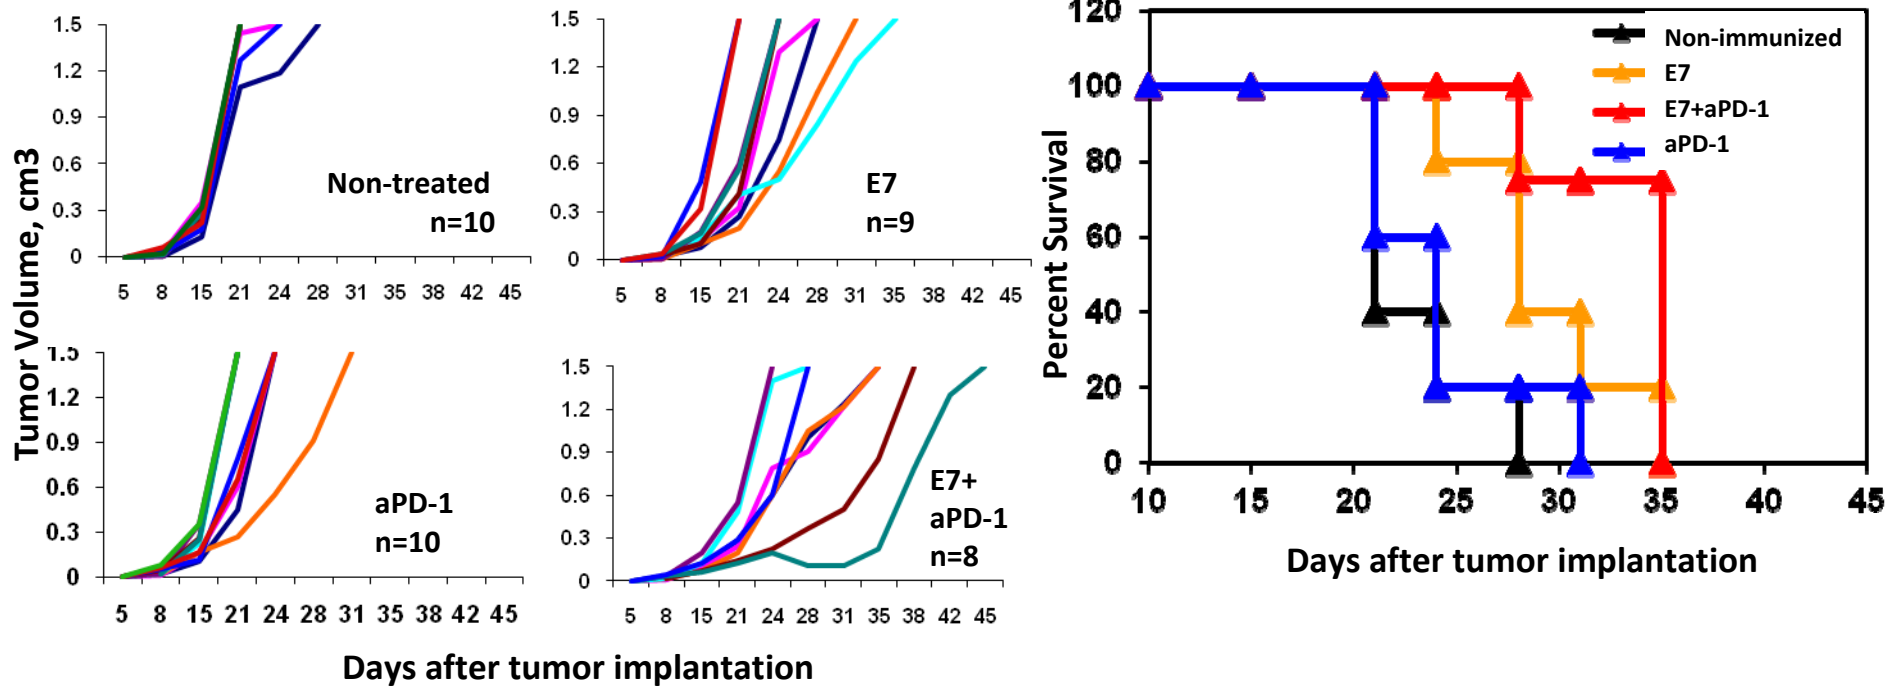

## Groups:

1. Non-treated
2. aPD-1
3. E7
4. E7 + aPD-1

**Day 7**  
**after implantation of**  
**50,000 TC-1 cell**

# Evaluation of therapeutic efficacy of vaccine/aPD-1 combination in TC-1 mouse model

# Tumor-Immune Modulating Network

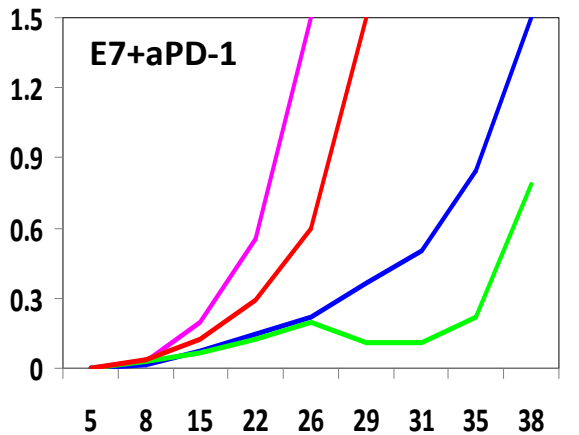

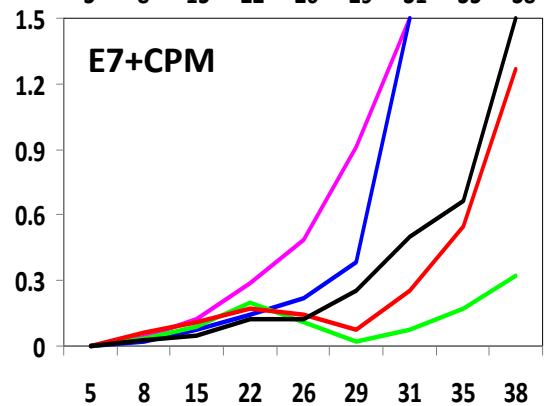

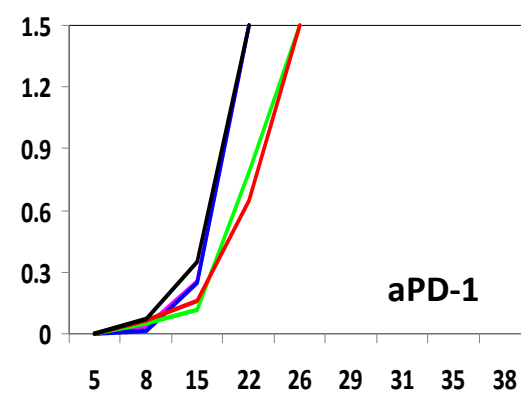

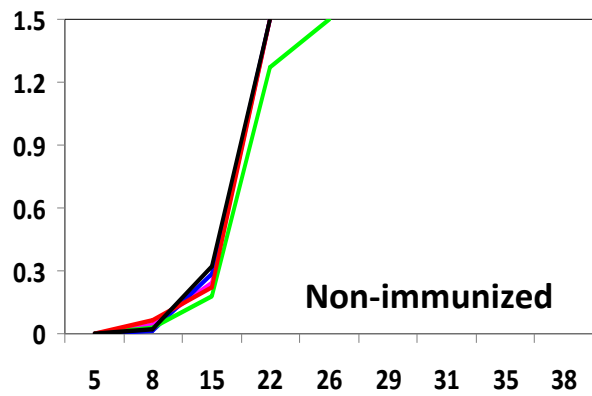

# Treg cell inhibitor-cyclophosphamide (CPM)

---

Low Dose CPM selectively targets Treg cells, leaving other T cell populations intact (*Lutsiak et al, Blood, 2005; Ikezawa et al, J Dermatol Sci, 2005*).

# Tumor Growth

# Vaccine/anti-PD-1/CPM combination promotes tumor rejection

# Anti-PD-1 Ab overcomes tumor-induced suppression of stimulated Tconv cell proliferation *in vitro*

\*\*\*P<0.001

# Vaccine/anti-PD-1/CPM combination induces potent antigen-specific immune responses in tumor bearing mice

# Vaccine/anti-PD-1/CPM combination increases the levels of tumor-infiltrated CD8<sup>+</sup> T cells

CD8<sup>+</sup> cells

\*P<0.05 and \*\*\*P<0.001

# Anti-PD-1 Ab and CPM synergize to decrease the level splenic and tumor infiltrated Treg cells

\*P<0.05 and \*\*P<0.01

# Anti-PD-1/CPM synergize to decrease and maintain low level of Tregs in periphery

# Vaccine/CPM combination increases the levels of tumor-infiltrated CD4<sup>+</sup> non-Treg cells

CD4 T cells

\*P<0.05, \*\*\*P<0.001

# Vaccine/anti-PD-1/CPM combination increases the CD8/Treg ratio in tumor microenvironment

CD8/ Treg ratio

\*P<0.05, \*\*\*P<0.001

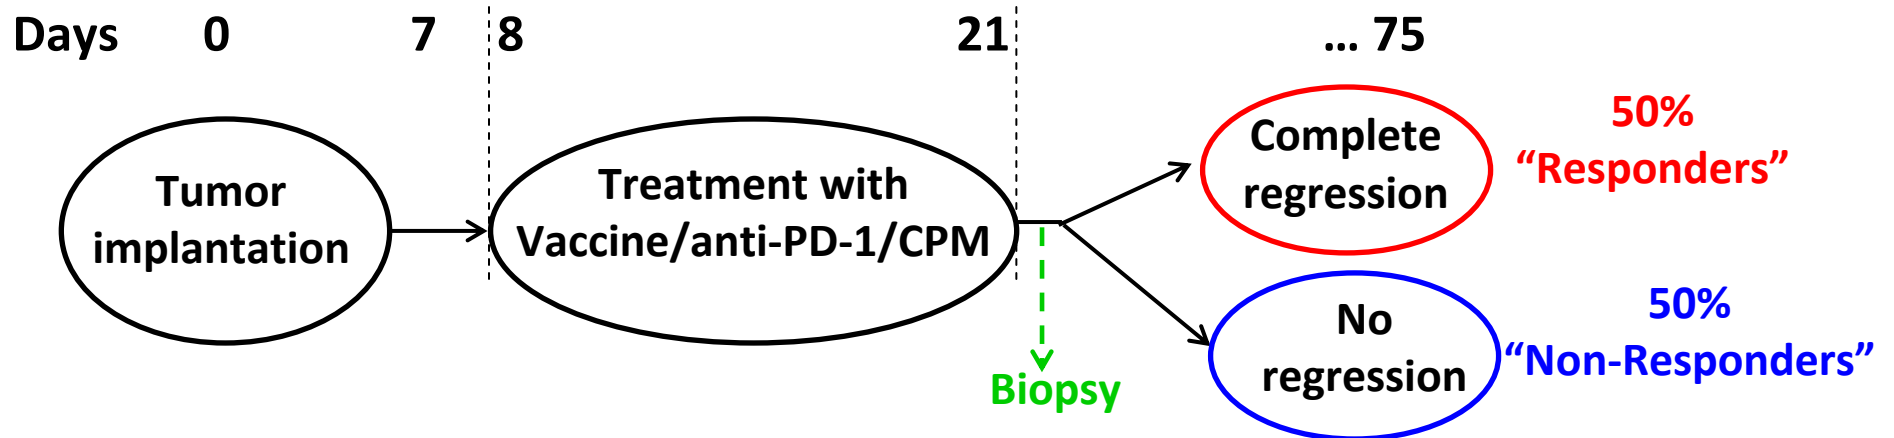

# Vaccine/anti-PD-1/CPM: Corrective Immune Therapy

# Biomarkers and combinational treatment

---

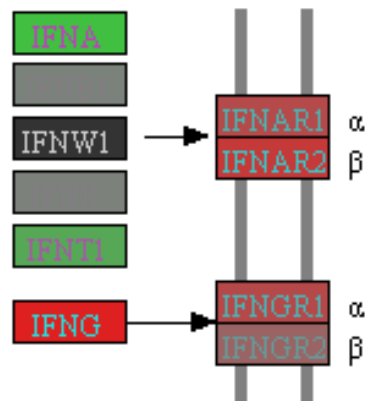

Are there biomarkers that could be identified and used to predict responses to specific immunotherapy?

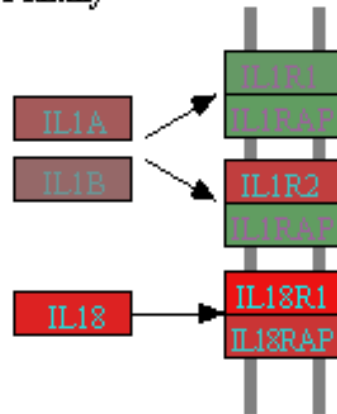

# Responders vs non-responders (**POST**-treatment biopsies, Day 21)

After treatment with vaccine/anti-PD-1/CPM the cytokine receptors, chemokines and factors related to tumor-infiltrated T cells (mostly Th1 type and CD8 T cells) were significantly increased in responders compared to non-responders.

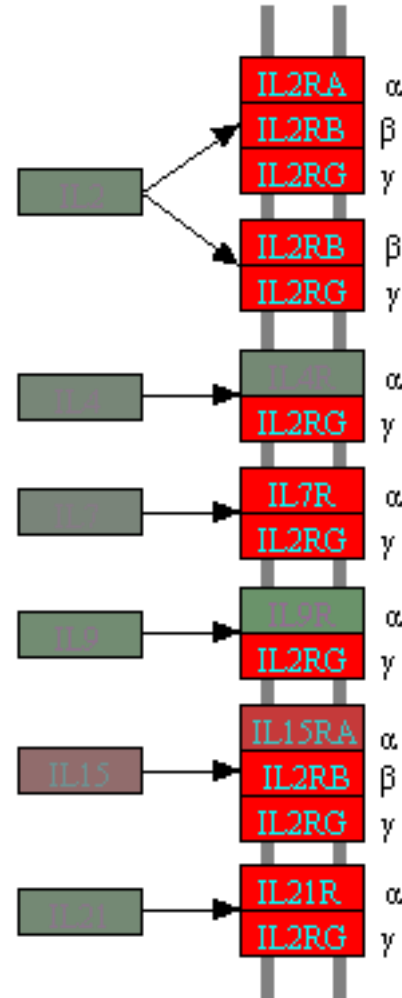

Interferon family

IL-1 family

IL2RG shared

CC subfamily

# Responders vs non-responders (**POST**-treatment biopsies, Day 21)

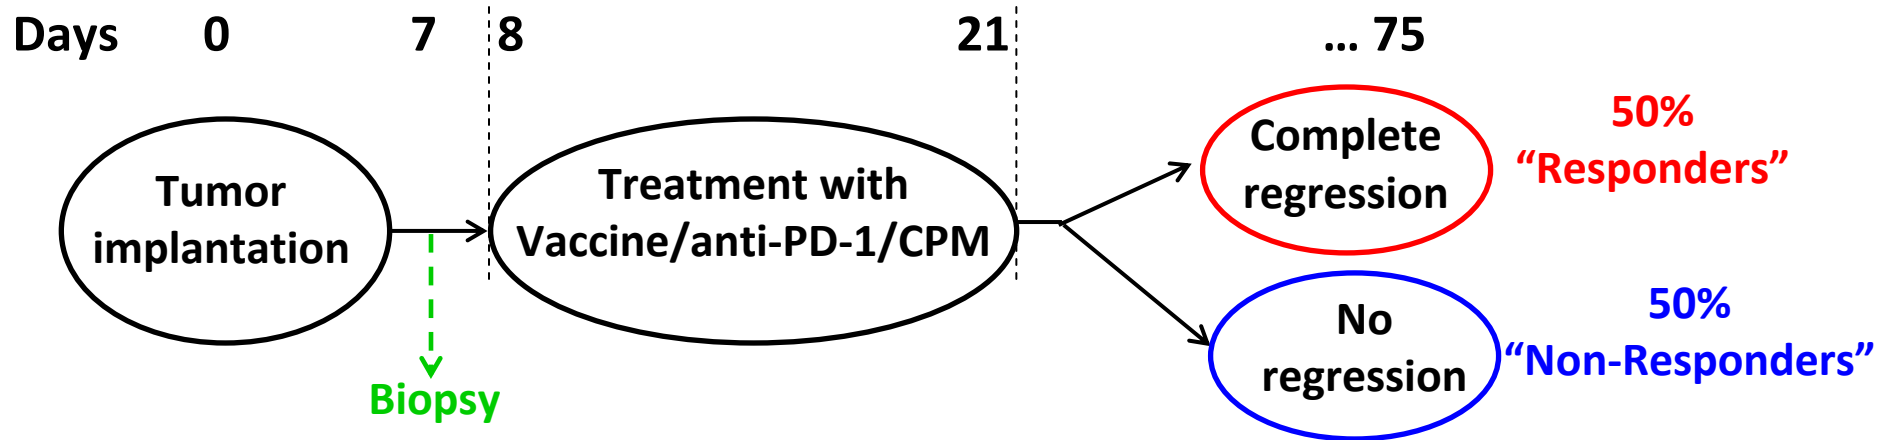

---

# Biomarkers and combinational treatment

---

Are there biomarkers that could be identified and used to predict responses to specific immunotherapy?

## **Biomarkers and combinational treatment**

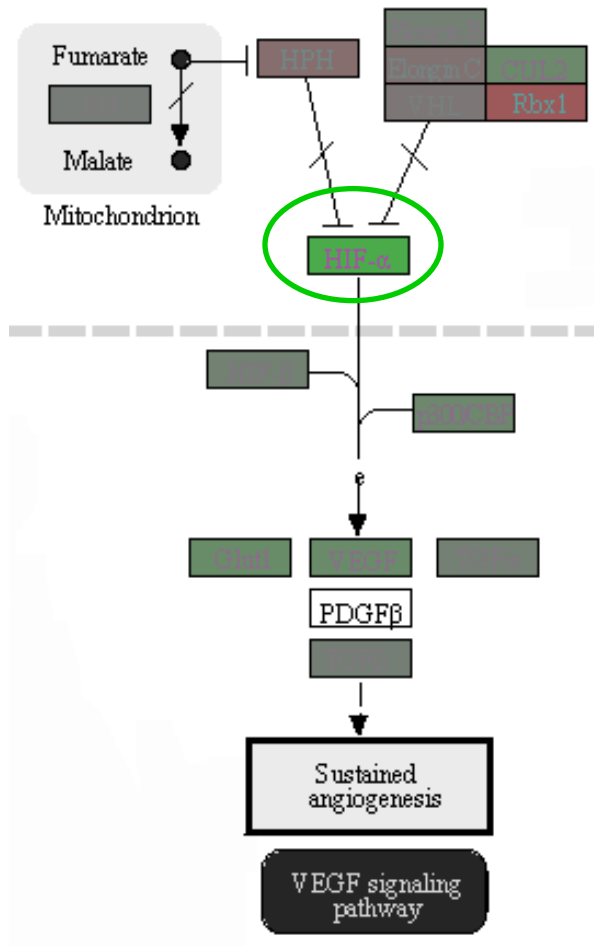

---

**Tested 28,000 coding transcripts analyzed  
(Affymetrix Array)**

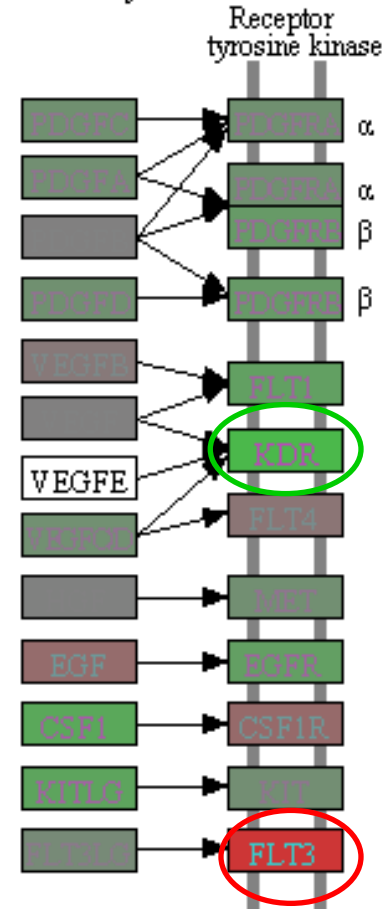

**Identified a panel of 8 genes with over 5-fold  
statistically significant difference that are  
predictive of response**

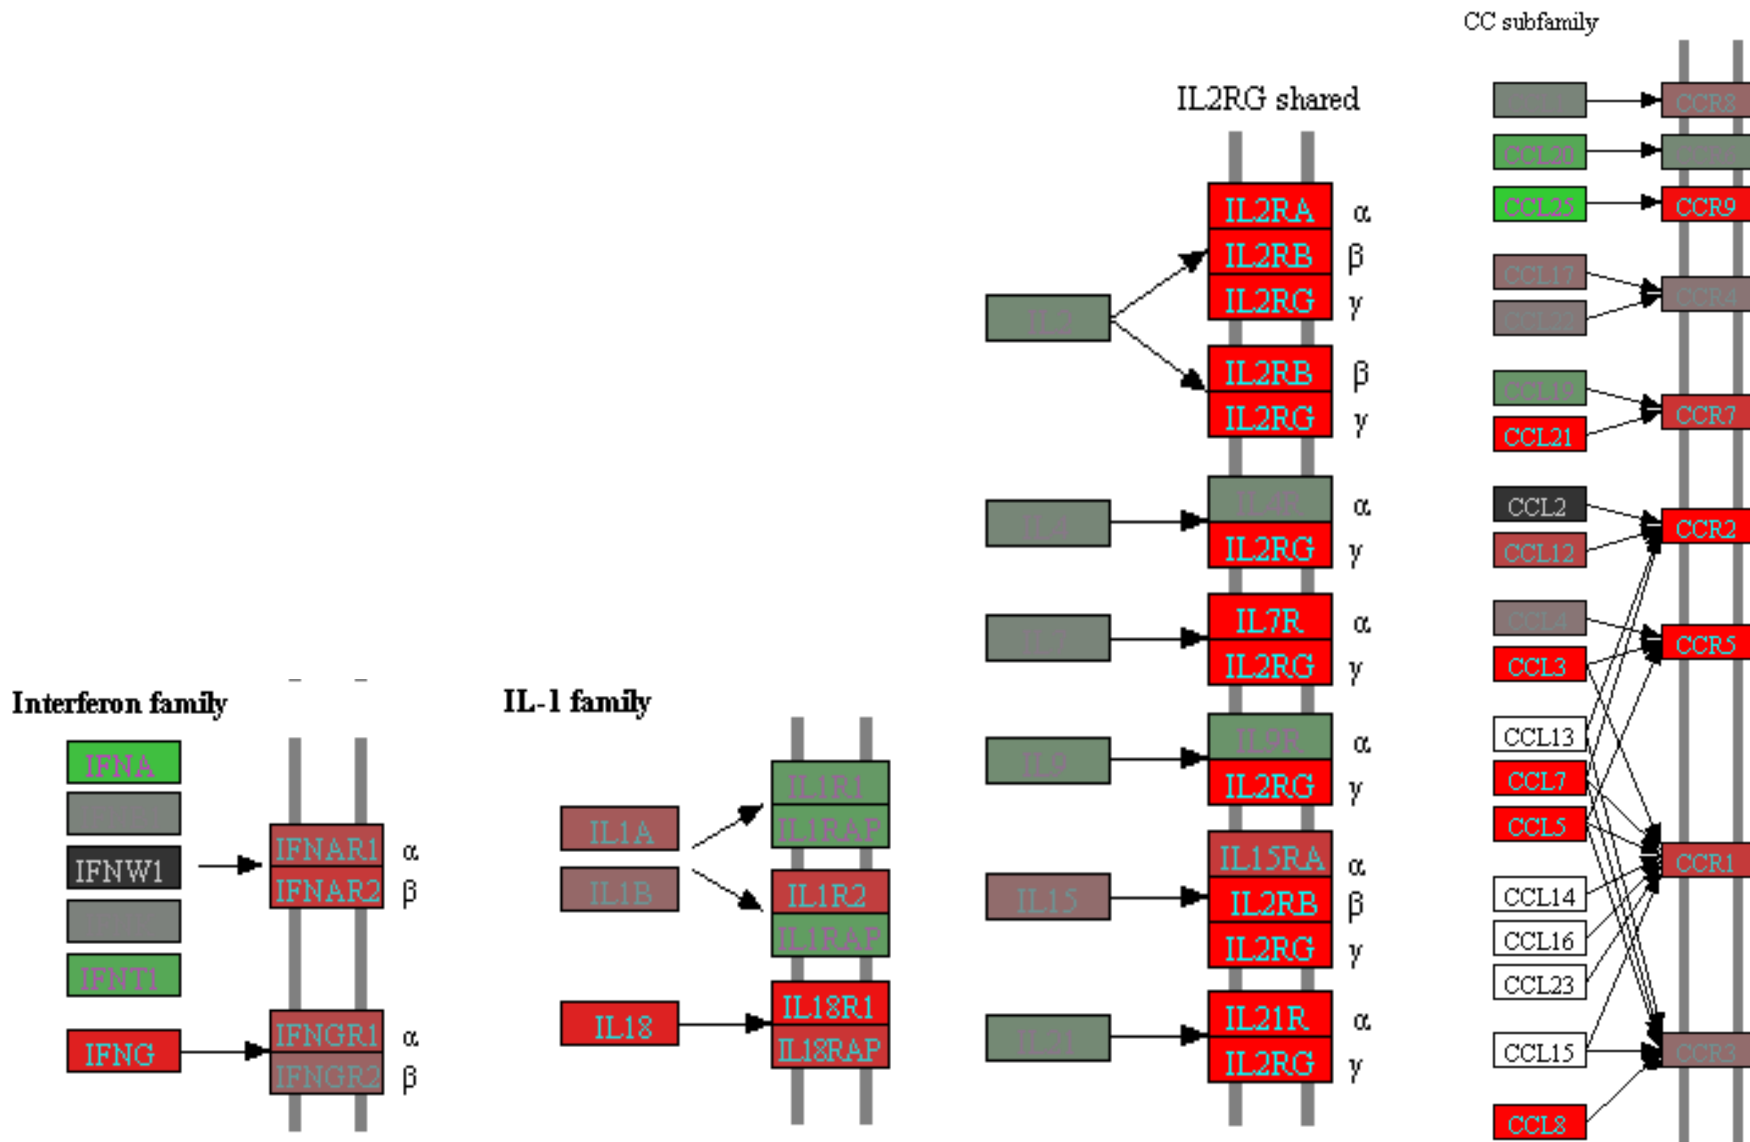

# Responders vs non-responders (**PRE**-treatment biopsies, Day 7)

## PDGF Family

# Responders vs non-responders (**POST**-treatment biopsies, Day 21)

# Biomarkers and combinational treatment

Pre-treatment  
8 genes  
panel  
changes

hypoxia and angiogenesis  
expansion of hematopoietic cells  
chemoattraction of activated T cells

Day 21 (Post-treatment)

- IFNg
- IL18
- IL2R
- IL21R
- IL7R
- T cell related chemokines

# **Clinical Trial Translation**

**A phase II clinical trial of CT-011 and CPM with  
Provenge in prostate cancer patients**

# Design

**Part 1, Run In phase, up to 12 patients:**

**CPM 250 mg/m<sup>2</sup> (Day -1) +**

**Sipuleucel –T Day 0, 14 and 28 (3-6 patients)**

**CPM 125 mg/m<sup>2</sup>**

CPM = Low Dose Cyclophosphamide

Apheresis 2-3 days prior to each dose of Sipuleucel-T for cell generation

# Design

## Part 2, Randomized, total 45 patients

A. Sipuleucel-T: Q 2 Wk X 3

B. Sipuleucel-T Day 0 +  
CT-011 (3 mg/kg Day 2) Q 2 Wk X 3

C. CPM (Day -1 only) +  
Sipuleucel-T Day 0 +  
CT-011 (3 mg/kg Day 2) >>> Q 2 Wk X 3

CPM = Low Dose Cyclophosphamide

Apheresis 2-3 days prior to each dose of Sipuleucel-T for cell generation

# Inclusion criteria

- CRPC with progression, testosterone < 50 ng/dL.
- PSA over nadir at least 2X, 3 weeks apart.
- Failed or refused chemotherapy.

# Trial Endpoints

## Primary endpoint

- Feasibility Provenge™+ CPM.
- Immune Response

## Secondary endpoint

- Progression-free survival
- Overall survival (OS)
- Toxicity

# Clinical Trials

- **A Phase I clinical trial combining CT-011 with P53 vaccine**
- **A phase II clinical trial of CT-011 and chemotherapy in pancreatic cancer patients as an adjuvant therapy.**

**PD-1, PD-L1, PD-L2 type molecules**

# Vaccine/B7-DC-Ig/CPM combinations induce potent antigen-specific immune responses in tumor bearing mice

\*P<0.05, \*\*\*P<0.001

# Vaccine/B7-DC-Ig/CPM combinations promote TC-1 tumor rejection

In contrast to anti-PD-1 Ab, B7-DC-Ig does not require CPM to decrease the level of Treg cells

Treg

Anti-PD-1 Ab

B7-DC-Ig

\*P<0.05, \*\*P<0.01, \*\*\*P<0.001

# In contrast to anti-PD-1 Ab, B7-DC-Ig decreases the level of vaccine/CPM-induced of tumor-infiltrated CD4<sup>+</sup>FoxP3<sup>-</sup> T cells

## Tconv

\*P<0.05, \*\*\*P<0.001

# In contrast to anti-PD-1, B7-DC-Ig-based treatment does not affect CD8 T cell numbers

## CD8

### Anti-PD-1 Ab

### B7-DC-Ig

\*P<0.05, \*\*\*P<0.001

# B7-DC-Ig decreases the level of tumor infiltrated PD-1<sup>high</sup> CD8<sup>+</sup>T cells

## In contrast to anti-PD-1 Ab, B7-DC-Ig doesn't overcome tumor-induced suppression of stimulated Tconv cell proliferation

---

No blocking of PD-1/PD-L1 interaction. Due to low affinity of AMP-224 binding to PD-1

# Differential effect of B7-DC-Ig on proliferation of different T cell subsets

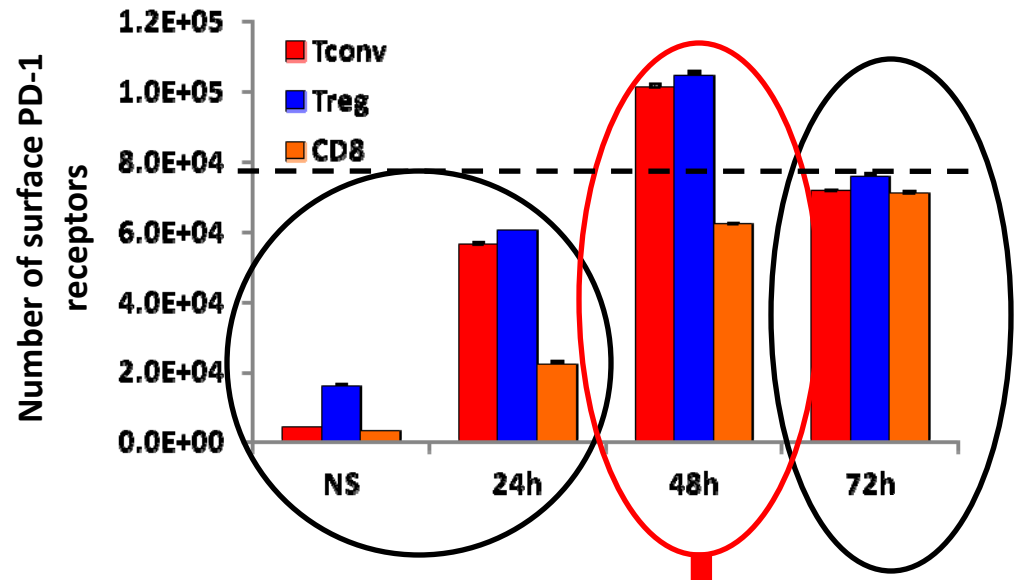

## Surface PD-1 expression on different T cell subsets at non-stimulated stage

---

# Number of surface PD-1 molecules on different T cell subsets at different time-points after stimulation

# Acknowledgment
